

# Managed Detection and Response (MDR) Services for Networks

*Comprehensive visibility, detection, and response for modern networks*

In the modern digital world, it is nearly impossible to design a resilient network without introducing some degree of complexity. Protecting modern networks requires a high level of expertise and 24/7 monitoring to rapidly mitigate and respond to threats.

Pondurance MDR for Networks delivers a 24/7 detection and response solution that analyzes your network traffic to uncover threats and drive rapid mitigation. Powered by a dynamic technology platform and elite security operations centers (SOCs), we provide full visibility into your data and round-the-clock access to Pondurance experts for help with any issue, any time.

## THE PONDURANCE DIFFERENCE

**24/7, U.S.-based SOC**s

**Skilled threat hunters**

**360-degree full visibility across networks, logs, endpoints, and cloud environments**

**Rapid response and close collaboration**

**Integration with your existing infrastructure and controls**

**Custom service packages designed for your desired business outcomes**

## PARTNER WITH OUR SECURITY EXPERTS

Pondurance's Network MDR offering is a physical or virtual appliance-based solution that uses network sensors to collect and monitor traffic from every location. The platform aggregates and correlates data so the Pondurance SOC can

deliver concise threat intelligence which enables them to generate, prioritize, and investigate alerts with maximum efficiency.

The sensors gather network data in full PCAP form across on-premises and cloud resources and record the information locally. Alerts are then presented to the Pondurance SOC for further investigation and validation while threat hunts are continually performed against this network information, for discovery of new threat attacker techniques. After rigorous analysis, validated threats with recommendations for remediation are sent to the client via the Scope platform, with analysts at the ready 24/7 to help respond to incidents and mitigate threats.

## KEY FEATURES

Unlike security tool vendors or traditional MSSPs, Pondurance delivers comprehensive SOC services that enable organizations to quickly adapt in today's rapidly transforming digital world. With Pondurance MDR for Networks, you get:

- 360-degree network visibility into AWS, Azure and Google Cloud environments with log and packet ingest on the Network Sensor
- 24/7 threat hunting included with MDR services
- All your data, dashboards, analyses, alerts, and communications with the Pondurance SOC are at your fingertips in our Scope platform

*"Pondurance was great to work with during a critical time of need and have since been valued partners in helping us protect patient data and business continuity."*
